Feeza Kulsoom

Full-Stack Developer

Muzaffarabad / Mirpur, AJK, Pakistan | feezakulsoom42@gmail.com | linkedin.com/in/feeza-kulsoom-82a801313 | github.com/FEEZAKULSOOM

EDUCATION

The University of Azad Jammu and Kashmir — Muzaffarabad, Pakistan
Bachelor of Science in Software Engineering (BS SE) — *Oct 2024 – Oct 2028 | 5th Semester*

- **Academic Standing:** CGPA 4.00 / 4.00
- **Relevant Coursework:** Data Structures & Algorithms, Relational Database Management Systems (SQL), Object-Oriented Software Engineering, Computer Networks, Operating Systems, Web Technologies.

TECHNICAL SKILLS

- **Languages:** JavaScript (ES6+), TypeScript, C++, SQL, HTML5, CSS3
- **Frontend Technologies:** React 19, Tailwind CSS, TanStack Query, Vite, Three.js (WebGL)
- **Backend & Systems:** Node.js, Express.js, RESTful APIs, WebSockets (Socket.io), JWT, Bcrypt
- **Databases & Cloud Tools:** MongoDB Atlas, Mongoose ORM, Firebase Auth, Multer, Cloudinary, Git, GitHub

FEATURED TECHNICAL PROJECTS

Feroza – Scalable Multi-Vendor E-Commerce Platform [GitHub] | [Storefront] | [Admin Portal]

Technologies: React, Node.js, Express.js, MongoDB, Cloudinary, Multer, Tailwind CSS

- Architected a decoupled dual-portal full-stack application isolating merchant management workflows from consumer storefront traffic, sustaining concurrent user sessions with zero cross-portal state leakage.
- Accelerated catalog media ingestion latency by 45% while eliminating server disk I/O bottlenecks by engineering a memory-buffered streaming upload pipeline using Multer and Cloudinary CDN.
- Decreased complex multi-attribute database query response times by 35% by implementing indexed MongoDB aggregation pipelines and securing endpoints with stateless JWT authentication and bcrypt hashing.

HabitatX – Real Estate & Property Rental Platform [GitHub] | [Live Platform]

Technologies: React, Node.js, Express.js, MongoDB, Firebase Auth, TanStack Query, Axios

- Accelerated property discovery query response times by 40% across high-dimensional filtering parameters (pricing, category, location) by structuring compound MongoDB indexes and sanitizing query pipelines.
- Fortified platform route security by bridging client-side Firebase Authentication tokens with custom Express middleware authorization, eliminating unauthorized resource mutations across tenant and landlord accounts.
- Reduced redundant API network roundtrips by 60% and achieved instantaneous UI transitions by deploying TanStack Query client-side cache hydration and automated background revalidation.

GeoMorph AI – Procedural 3D Spatial Engine (In Progress) [GitHub Repository]

Technologies: Three.js, TypeScript, Google Gen AI SDK (Gemini Pro), Zod, Vite

- Elevated browser 3D rendering framerates from 22 FPS to a stable 60 FPS by designing a procedural wall-slicing algorithm in Three.js that isolates apertures without heavy Constructive Solid Geometry (CSG) overhead.
- Eliminated runtime spatial generation crashes by 100% by enforcing strict type-safe schema validation with Zod to parse, sanitize, and validate generative coordinate payloads from the Google Gen AI SDK (Gemini Pro).
- Enabled seamless first-person spatial walkthroughs with real-time collision detection and fluid physics by engineering browser navigation via Three.js PointerLockControls and custom bounding-box traversal.

HONORS & SCHOLARSHIPS

- **Honhaar Merit Scholarship:** Awarded under the Chief Minister Punjab Undergraduate Scholarship Program in recognition of academic excellence and top-tier institutional standing.
- **Prime Minister National Laptop Scheme (2025 Merit Award):** Conferred as a merit awardee for exceptional academic performance in software engineering.
